Given a string and we have to swap its adjacent characters(pairs).

Here, to swap adjacent characters of a given string - we have a condition, which is "string length must be EVEN i.e. string must contains even number of characters".

## Input Format

1. Take a string from the user.

## Constraints

1. String length should not exceed 1000.

## Output Format

1. It should print the swapped string.
2. if string length is odd then print "Odd length."

## Sample Input 0

```
Hello
```

## Sample Output 0

```
Odd length.
```

## Sample Input 1

```
help
```

## Sample Output 1

```
ehpl
```
